VI. Assorted & Unprovenanced	183

INTRODUCTION

Thousands of ivories were found in the great palace arsenal known as Fort Shalmaneser, located in the south-east corner of the lower town at Nimrud. The majority were found in storerooms, three in the South West Quadrant, SW7, SW11/12 and SW37, and one in the Throne Room block, T10. Some 500 other examples were found in smaller collections or scattered singly through the rooms of the Fort.

In 1967 the British School of Archaeology in Iraq began the immense task of publishing the ivories with Jeffrey Orchard's *Ivories from Nimrud I, 2, Equestrian Bridle-Harness Ornaments*. This was a catalogue of one class of ivories, defined by function, rather than provenance, although the majority actually came from one room, Room SW37. The second volume by Max Mallowan and Leri Glynn Davies appeared in 1970 and collected ivories by style, the distinctive Assyrian style, *Ivories from Nimrud II, Ivories in Assyrian Style*: these were found both in the palaces and temples of the Citadel and in Fort Shalmaneser. The third by Max Mallowan and Georgina Herrmann published the ivories found in one of the storerooms, SW7, which contained a stylistically homogeneous series of large chairbacks or bedheads, as well as a few assorted ivories: *Ivories from Nimrud III, Furniture from SW7 Fort Shalmaneser*. Following this example of accepting the importance of provenance, the next two volumes by Georgina Herrmann published ivories according to their find place.

The largest assemblage of ivories from Nimrud were found in the great storeroom, SW37. No less than 1573 ivories were catalogued in *Ivories from Nimrud IV, Ivories from Room SW37 Fort Shalmaneser*: however, it should be remembered that not every fragment from this room has been recorded. There are still numerous uncatalogued fragments in the Iraq Museum: these include some which were unavailable for study as well as repetitive fragments such as those showing a horn from a procession of cattle, or part of a palmette from one of the numerous examples of running palmettes. The reason why such fragments were not all catalogued was logistical. It is possible to 'process' a large number of ivories during a morning shift at the Museum: however, such a task is very demanding on the museum staff. They are used to providing scholars with a box of material and leaving them to work on it for several weeks. Processing, let us say, 50-70 ivories a day, required staff to find and fetch them from the magazines and then register them in and out – a lengthy task, especially when they lack field or museum numbers. Working against the clock – to try to complete work on the ivories provided by midday so that there was a chance of new material for the following day, I concentrated on the more important examples, rather than the purely repetitive. So do not try any statistical studies!

The fifth catalogue, *Ivories from Nimrud V, The Small Collections from Fort Shalmaneser* (1992), gathered together ivories from the residential areas and those in use, rather than from the main storerooms.

Still awaiting publication are the ivories from another storeroom in the SW Quadrant, SW11/12. Many of these ivories have been photographed and recorded: however, many were still arranged on trays in the magazines awaiting cataloguing in 1990. Their current state after the looting of the Museum is unknown. Once it is possible to return to the museum and assess whether more material from this storeroom can be salvaged, then work will continue on this volume. Also outstanding is the material from T10, but this, if extant, requires conservation.

As has already been pointed out in thoughtful reviews by Winter (*J.N.E.S.* 51, 1992, 140-141; 57, 1998, 150-53), and Cecchini (*Orientalia* 63, 1994, 146-150), among others, publication of the catalogues is only the first stage of analysis of the ivories, which form an 'indispensable point of reference for studies of the art of the first centuries of the first millennium B.C.' (Cecchini 1994, 149). New studies will need to address in depth problems of iconography, style, function, technique, transition of ideas and craftspeople, distribution, other media, etc. To aid scholars in this next stage of work, the B.S.A.I. decided to prepare a scanned archive of the published ivories from Fort Shalmaneser, arranged by provenance rather than by published catalogue: the few published pieces from T10 are not included, but await the final publication. Wherever possible the scans were taken from the original photographs. However, where these have been mislaid during the years, the published images have been scanned and marked as secondary images, 'from book'.

The scanned archive is not designed to replace the published catalogues, but to supplement them. It consists of one CD containing JPEG files of the ivories, plus a handbook with 'thumb-nail' size images, to enable rapid identification. The captions are brief: they consist of the scan reference, the provenance, e.g. FS [Fort Shalmaneser], SW37 (room number), the field number, ND9422, and the catalogue reference, IN IV, 12 (*Ivories from Nimrud IV*, no. 12). Additional information is readily available in the relevant catalogues.

Each room or storeroom containing ivories is highlighted on the small plans of Fort Shalmaneser at the start of each section. The archive starts with the ivories published in *I.N. V*, with those from the Residency, followed by the other small collections from the S.E., N.E. and N.W. Quadrants, before beginning on the vast number of ivories from the S.W. Quadrant. These too are arranged by room, with the ivories from both small groups, as in SW2, as well as the two published storerooms of the SW Quadrant, SW7, and SW37.

Copyright

The photographs were taken by many different photographers, acknowledged in the relevant volumes of *Ivories from Nimrud*. However, copyright of all photographs belongs to the British School of Archaeology in Iraq. Before publishing, please request permission by contacting - Hon. Secretary, British School of Archaeology in Iraq, C/o British Academy, 10 Carlton House Terrace, London, SW1Y 5AH: email bsai@britac.ac.uk.

Acknowledgments

The design of the handbook is the work of Stuart Laidlaw, a master of design and digital archiving. The task of scanning the thousands of images presented in this archive, preparing their captions and subsequent layouts has been undertaken with skill, accuracy and patience by Helena Coffey. Without their enthusiasm and joint input, what we hope will prove to be an extremely useful aid to further study would never have been assembled. I(GH) already find it invaluable. To both of them I am immensely grateful. The work has been funded by the British School of Archaeology in Iraq.

Technical Information

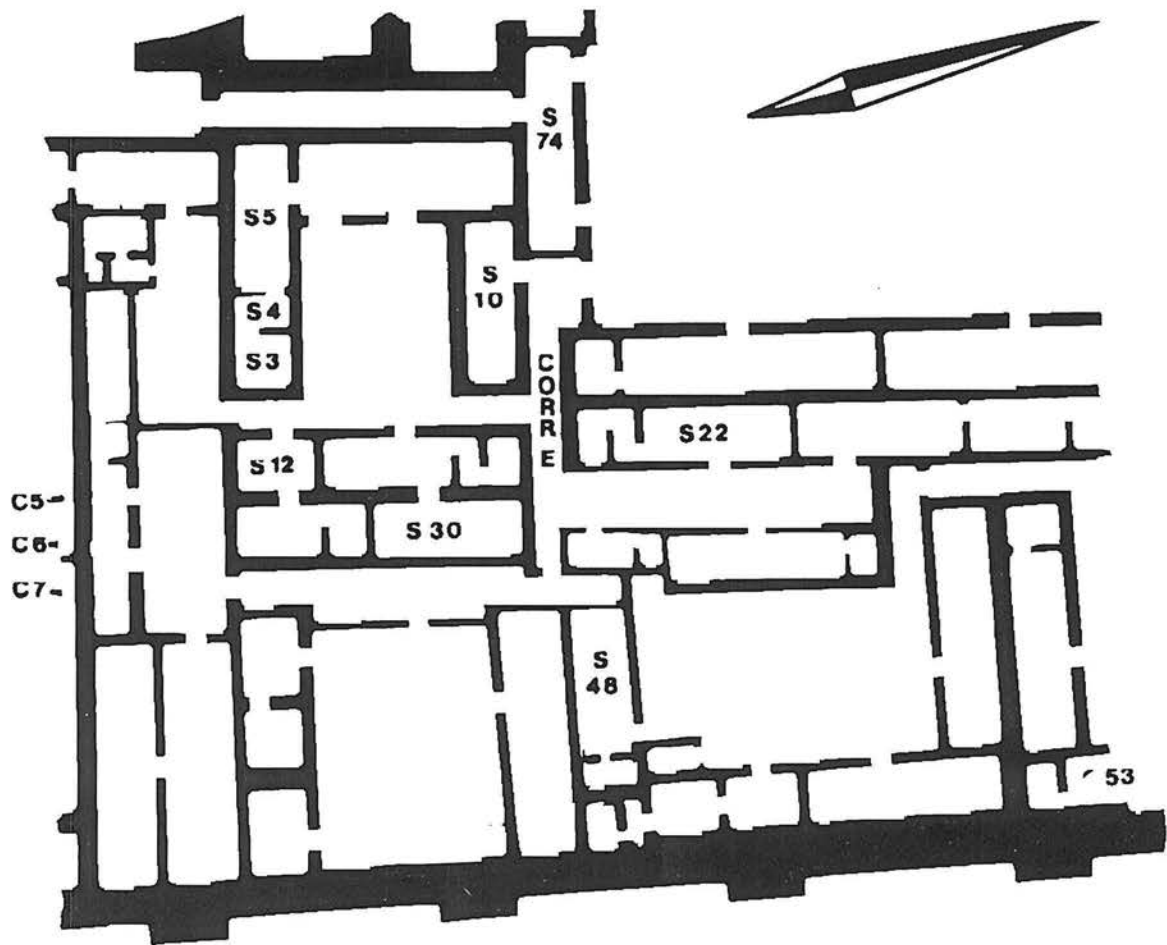

The black and white photographs have been scanned at 300 dpi at 100% on a Umax flat bed scanner. These files have been cropped and the range of levels adjusted to maximise the information on the photograph. No other changes have been made. It may therefore be that for the maximum quality in publication, small adjustments may be made in a proprietary image manipulation programme such as Adobe Photoshop. The files have been saved as greyscale JPEG files on this CD. The original files are uncompressed TIFF and are held by the B.S.A.I. and the British Museum. The output quality of the JPEG file is very similar to the TIFF files at any size under A5.

A quicktime contact sheet is included in each folder. This may be read with free Quicktime software on any current web browser. Also included are iView Media Pro catalogues of all photographs in any particular folder. This application programme is available on the World Wide Web at: www.iView.multimedia.com. We have included readers for these files for both Windows or Macintosh as free to exchange .exe files for Windows and .sit files for Macintosh. These applications will allow you to browse the catalogues and enlarge individual files.

If the reader applications do not open on your machine then download them freely from the website as they are condensed files opening with Stuffit Expander or other built in software on your computer.
